Projects

1. Wafa2 – Your Virtual Closet implemented using C++ windows form.

- This application aims to collect a large database of clothing items to hand-pick outfits that are suitable for the occasion and style of the user.

2. El Nas Library – Library Management System implemented using Java, JavaFX, and CSS.

- A system which aids students in ordering and borrowing books virtually as well as organizing work for admins.

3. Nickelodeon channel relaunching campaign created using adobe photoshop.

- A rebranding campaign for the kids' channel Nickelodeon.

4. Tamarai – E-commerce web application implemented using EJS, MongoDB, ExpressJS, and NodeJS.

- Sellers can have their own platform to sell their products

- People can buy products that sellers provide on this platform

- Admins can manage and gain insights on the application

5. 24SevenLimousine – Car Management System implemented using HTML, CSS, and PHP.

- People can order their rides from any location and choose the suitable vehicle for their trip.

- People can rent their cars to the company for a sum of money.

- Drivers can be hired for the company.

- Admins can manage and gain insights on all aspects of the application.
